Explanatory notes	
	A responsible investment policy(ies) that covers an overall approach to responsible investment and/or guidelines on environmental, social and/or governance factors is a minimum requirement for investor signatories at the PRI.
PRI minimum requirements	There is no one-size-fits-all approach to writing a responsible investment policy(ies) as it will vary amongst investors. However, it is considered good practice for signatories' policy(ies) to fully outline how they incorporate responsible investment considerations across their organisation and their activities. Whilst it is good practice to integrate responsible investment considerations into a core investment policy to align ESG factors with mainstream policy considerations, developing standalone policies or guidelines may be more suitable for some types of investors.
	In order to meet this minimum requirement, at least one of the following elements must be set out: (A) Overall approach to responsible investment (B) Guidelines on environmental factors (C) Guidelines of social factors (D) Guidelines on governance factors
Durmana of indicator	This indicator aims to assess the scope and level of detail of the responsible investment elements signatories include in their formal responsible investment policy(ies). These elements may be set out in one or multiple standalone policy or guideline documents, or they may be part of a broader investment policy.
Purpose of indicator	It is considered good practice for signatories' responsible investment policy(ies) to fully outline how they incorporate responsible investment considerations across their organisation and activities to help set clear guidance and expectations for themselves and external stakeholders.
	The responsible investment elements may be set out in one or multiple standalone policy or guideline documents, or they may be part of a broader investment policy.
	In this indicator and throughout this module, 'formal responsible investment policy(ies)' means the policy should be in a written format and is shared with stakeholders.
Additional reporting	The policy elements listed in the answer options may cover the following aspects:
guidance	In answer option A, 'Overall approach to responsible investment' may cover high-level components, such as an overall description of signatories' responsible investment beliefs or values, guidelines, approach and strategies. be
	In answer option B, 'Guidelines on environmental factors' refers to explicit information on how signatories address environmental factors, including climate change. Signatories can provide further detail on their specific guidelines regarding climate-related issues in [PGS 2].

In answer option C, 'Guidelines on social factors' refers to explicit information on how signatories address social factors, including human rights. Guidelines on social factors can cover both (a) how these factors influence investment decisions and (b) how investment activities influence social sustainability outcomes in line with international standards on human rights. Signatories can provide further detail on their specific guidelines on human rights in [PGS 2].

In answer option D, 'Guidelines on governance factors' refers to explicit information on how signatories address governance factors.

In answer option E, 'Guidelines on sustainability outcomes' refers to information on how signatories consider sustainability outcomes in their investment and stewardship activities. This element may also cover signatories' sustainability outcome objectives.

In answer option F, 'Guidelines tailored to the specific asset class(es) we hold' refers to specific policy statements covering how ESG factors are incorporated in individual asset classes.

In answer option G, 'Approach to exclusions' refers to signatories' general approach and/or details on specific exclusions.

In answer option H, 'Guidelines on managing conflicts of interest related to responsible investment' refers to signatories' approach to addressing conflicts of interest specifically related to responsible investment. For example, signatories may experience conflicts of interest regarding their engagements with policy makers. A certain policy development may favour the short-term financial performance of an asset while undermining the signatory's overall responsible investment priorities. To prevent this, signatories may want to have formal processes in place that systematically address these conflicts of interest and ensure that responsible investment is prioritised in line with their objectives.

In answer option I, 'Stewardship: Guidelines on engagement with investees' refers to explicit information on how signatories use their influence over current or potential investees. Depending on the asset class, these guidelines may include signatories' approach to engagement with current or potential investee (e.g. company) or a non-issuer stakeholder (e.g. an external investment manager or policy maker) to improve practice on an ESG factor, make progress on sustainability outcomes, or improve public disclosure. In private markets, engagement also refers to investors' direct control over and dialogue with management teams and/or Board of portfolio companies and/or real assets.

In answer option J, 'Stewardship: Guidelines on overall political engagement' refers to explicit information on how signatories approach their overall political engagement activities. Overall political engagement takes many forms: it includes but is not limited to engaging with policy makers to contribute to specific policy developments, lobbying, making political contributions, using revolving doors (the movement of senior people between the private and public sectors), shaping public opinion through mass media and social media campaigns, and funding grassroot organisations and think tanks. Overall political engagement can be carried out directly or through a third party such as a trade association or industry body.

In answer option K, 'Stewardship: Guidelines on engagement with other key stakeholders' refers to explicit information on how signatories approach their dialogue and collaboration to advance stewardship goals with

- financial system stakeholders, such as standard setters, researchers, the media, external investment managers, external service providers and/or
- other relevant actors within the broader economy, such as NGOs, workers and trade unions, communities, end-users of products and services and other rights-holders.

In answer option L, 'Stewardship: Guidelines on (proxy) voting' refers to explicit information on how signatories approach voting decisions, including how ESG factors influence voting decisions and for which types of votes ESG is considered. This answer option will only be displayed for signatories who report conducting voting activities in [OO 9].

Explanatory notes	Explanatory notes			
Purpose of indicator	This indicator aims to understand whether signatories explicitly address climate change, human rights or other systematic sustainability issues in their responsible investment policies or guidelines.			
	The PRI has identified climate change and human rights as the highest priority issues for signatory action. It is thus considered good practice for signatories to have a clear approach to these issues in their responsible investment policies and guidelines.			
	In this indicator, 'guidelines on climate change' refers to explicit information on signatories' management of climate-related financial risk in the context of their investment and stewardship activities, including any transition plans or ICAP plans. Guidelines on climate-related issues may be part of broader policies or guidelines on environmental factors.			
Additional reporting guidance	In this indicator, 'guidelines on human rights' refers to explicit information on how signatories approach human rights within the context of their investment and stewardship activities, including a commitment to respect internationally recognised human rights. Signatories' guidelines on human rights may be part of broader policies or guidelines on social factors.			

	In this indicator, 'guidelines on other systematic sustainability issues' refers to explicit information on how signatories approach systematic sustainability issues such as biodiversity, decent work, just transition, responsible political engagement or tax fairness. Signatories' guidelines on other systematic sustainability issues may be part of broader policies or guidelines on environmental, social or governance factors.				
Other resources	Extensive resources on climate change are available on the PRI's dedicated climate change webpage, including introductory and technical engagement guides. For further guidance on transition plans, see the ICAPS Guidance and the ICAPS Expectations Ladder, as well as the TCFD's Guidance on Metrics, Targets, and Transition Plans. See also the PRI's guide on Climate change for asset owners. For dedicated guidance on investors' role in human rights, see Why and how investors should act on human rights. Further resources are available on the PRI's dedicated human rights webpage, including Investor human rights policy commitments: an overview.				
	Resources on other environmental, social and governance systematic sustainability issues are available on the PRI's website on sustainability issues.

Explanatory notes					
Purpose of indicator	This indicator aims to assess how transparent signatories are regarding their responsible investment policies or guidelines. The PRI encourages transparency amongst signatories. It is considered good practice to publicly disclose responsible investment policies and/or guidelines, as this helps increase accountability to stakeholders and learning amongst peers.				
Additional reporting guidance	In this indicator, 'publicly available' policies or guidelines refers to those readily available to the general public, either directly accessible from a website or from a portal where anyone can register to obtain access. Links should be provided to the publicly available policy or guideline. If the policy or guideline is stored in a portal, the link to the relevant registration page should also be provided. If the general public can only access a policy or guideline by actively requesting access to it via email or similar, it will not be considered to be publicly available for the purpose of this indicator. In cases where several policy elements are available on the same webpage, signatories can provide the same link in as many answer options as applicable.

O (B) No	Elaborate: [Mandatory free text: large]					
Additional context to your response(s): [Voluntary free text: large]						

Explanatory notes	
Purpose of indicator	This indicator aims to understand whether signatories' policies and guidelines articulate the link between their approach to responsible investment and their legal duties towards clients and beneficiaries.
Additional reporting	In this indicator, 'fiduciary duties or equivalent obligations' refers to the investment-related duties owed by asset owners and investment managers. These may include duties of care, skill and prudence, and requirements to use powers for their proper purposes.
guidance	In answer option (A), signatories may elaborate on their understanding of how their responsible investment activities (i.e. incorporating ESG factors, systematic sustainability issues and/or sustainability outcomes into investment and stewardship activities) are related to the fulfilment of their fiduciary duties or equivalent obligations.
Other resources	For further resources on fiduciary duties or equivalent obligations and responsible investment, see the following resources developed by the PRI, UNEP FI, the Generation Foundation and Freshfields Bruckhaus Deringer: • The PRI's resources on fiduciary duty (including the Fiduciary duty in the 21st century final report) and • A legal framework for impact, which analyses the extent to which pursuing sustainability goals (whether as a means to achieve investors' financial return goals or as a distinct goal pursued alongside investors' financial returns) is legally required from or permitted to investors across 11 jurisdictions (Australia, Brazil, Canada, China, the European Union, France, Japan, the Netherlands, South Africa, the United Kingdom and the United States).

Additional context to	o your response(s):[Voluntary free text: la	arge]						

Explanatory notes	
Purpose of indicator	This indicator aims to identify whether signatories have clearly articulated and formalised different aspects of stewardship in their policy(ies) or guidelines on stewardship.
	It is considered good practice for investors to outline the full scope of their stewardship approach in their policy(ies) or guidelines on stewardship. It is also good practice for signatories' policy(ies) or guidelines on stewardship to cover both internally and externally managed assets, regardless of their investment strategy.
Additional reporting guidance	The policy(ies) or guidelines on stewardship may be a standalone policy or guideline or incorporated into a broader responsible investment policy (or similar).

In answer option A, 'overall stewardship objectives' refers to the principles, priorities and/or overall goals and objectives that govern stewardship activities. These could include clarity on the overall aim of stewardship activities (e.g. 'maximising overall value to beneficiaries'). In answer option B, 'prioritisation of specific ESG factors' refers to the signatories' process or criteria used to determine the most important ESG factors for their stewardship activities. In answer option C, 'criteria used to prioritise the investees, policy makers, key stakeholders, or other entities on which to focus our stewardship efforts' refers to the process or considerations signatories use to identify the entities on which to focus their stewardship efforts. This does not require signatories to list any actual entities in their policy(ies) or guidelines on stewardship. In this indicator, 'entity' refers to the target or focus of signatories' stewardship activities, i.e. the entity that signatories are seeking to influence to improve practice or public disclosure. Such an entity could be an investee, for instance, (i) a company (either listed or private, issuing equity or debt), (ii) a sovereign or sub-sovereign issuer (which could be engaged in the context of a sovereign engagement strategy) or (iii) a physical asset (e.g. a directly-held property or infrastructure asset). Alternatively, such an entity could also be (i) a government or policy maker (with whom the signatory may engage) or (ii) a non-governmental organisation. In answer option E, 'escalation' refers to the approach an investor takes if initial stewardship approaches are unsuccessful at achieving its objectives over a given time period. In the context of private markets, this could refer to escalating to the investees' board of directors, replacing the investee's management (in the case of majority investors) or selling the signatory's position in the investee company (for secondaries investors investing in companies or funds). In answer option G, 'conflicts of interest' refers to the conflicts that may occur where the interest of a client or beneficiary is not the same as – or is not perceived to be the same as – that of the signatory organisation. A conflict of interest may sometimes arise in connection with stewardship activities. For example, acting in the interests of clients may indicate that an investor should choose to vote against management at a company or engage with that company; however, the pension fund of that company, or the company itself, may also be a client or potential client of the investor or part of the investor's parent organisation. In the case of private markets investors, this could refer to cases of cross-holdings or different exit time horizons. Further information and resources on stewardship can be found on the PRI's dedicated stewardship webpage. Other resources See also An introduction to responsible investment: stewardship. ☐ (C) Yes, it includes voting principles and/or guidelines on specific governance factors							
O (D) Our policy on (proxy) voting does not include voting principles or guidelines on specific ESG factors							
Additional context to your response(s): [Voluntary free text: large]							

Explanatory notes	
Purpose of indicator	The purpose of this indicator is to determine whether a signatory's policy on (proxy) voting goes beyond corporate governance factors by including voting guidelines and/or principles on environmental and social factors. It is considered good practice for signatories' policy on (proxy) voting to include guidelines and/or principles on all ESG factors.
Additional reporting guidance	Voting principles are high-level statements that explain the investor's position on ESG factors and how they vote to effect progress on those factors. They enable investors to consider, consult and gain buy-in for the positions they will take and communicate clearly to companies and resolution-filers as to what kind of resolutions an investor will vote for. Examples of voting principles and/or guidelines might include specific guidelines that explain how an investor will vote in given circumstances (e.g. 'we will always vote for the separation of the chair and 'EO') as well as broader principles that govern voting decisions (e.g. 'given our commitment to human rights, we will prioritise the advancement of the UN Guiding Principles on Business and Human Rights above other factors through voting").
Other resources	Further information and resources on stewardship can be found on the 'PRI's dedicated stewardship webpage. For further guidance on voting principles, refer to Making voting count: principle-based voting on shareholder resolutions. For further guidance on (proxy) voting policies, refer to A practical guide to active ownership in listed equity. See also An introduction to responsible investment: stewardship.

O (E) Not applicable; we do not have a securities lending programme								
Additional context to your response(s): [Voluntary free text: large]								

Explanatory notes				
Purpose of indicator	Purpose of indicator The purpose of this indicator is to determine whether a signatory that has a securities lending programme addresses (proxy) voting in its publicly available policy. It is considered good practice for investors (who have a securities lending programme) to disclose their approach to securities lending and voting in a clear policy, as this promotes transparency.			
Additional reporting guidance	A policy that covers securities lending should include (at a minimum) an outline of the approach to securities lending and whether or where shares are recalled for (proxy) voting. In this indicator, the PRI scores signatories based on the presence and transparency of their securities lending programme. Signatories are not penalised for not having a securities lending programme.			
Other resources	Further information and resources on stewardship can be found on the PRI's dedicated stewardship webpage. For further guidance, refer to A practical guide to active ownership in listed equity.			

	The ICGN Guidance on Securities Lending is an additional source of guidance for investors interested in initiating a securities lending programme that does not impede responsible voting activities.

RESPONSIBLE INVESTMENT POLICY COVERAGE [PGS 8, PGS 9, PGS 10, PGS 10.1]

Indicator ID PGS 8	Dependent on:	PGS 1	-	Sub-section	PRI Principle	Type of indicator
MINIMUM REQUIREMENT	Gateway to:	N/A	Responsi	ble investment policy coverage	1	CORE
What percentage of your total AUM is covered by the below elements of your responsible investment policy(ies)?						
	Combined AUM coverage of all policy elements				ments	
(A) Overall approach to responsible investment [Dropdown list]						
(B) Guidelines on environmental factors			(1) 50% or less (2) >50% to 60% (3) >60% to 70%			
(C) Guidelines on social factors			(3) >80% to 70% (4) >70% to 80% (5) >80% to 90%			
(D) Guidelines on governance factors		(6) >90% to <100% (7) 100%				
Additional context to your response(s): [Voluntary free text: large]						

To meet this minimum requirement, signatories should assess whether the responsible investment policy elements listed in this indicator are applied to more than 50% of all portfolios they hold. The >50% coverage should be assessed against the AUM reported in row (a) of indicator [OO4] and is not an obligation for signatories to invest >50% of their AUM in sustainable or responsible investment products.

Purpose of indicator	Throughout the reporting framework, the PRI seeks to capture the scope and depth of signatories' policies and activities by asking about AUM coverage, frequency of activities or similar. This indicator aims to establish whether the AUM coverage of signatories' responsible investment policies meet PRI's minimum requirements for investor membership. It is considered good practice for responsible investment policies to be applied to the highest possible percentage of signatories' AUM.		
Additional reporting guidance	In principle, some of these policy elements might apply to all assets, even if their implementation might vary in practice. If this is the case for any of the policy elements listed in this indicator, signatories should report the relevant policy element coverage as 100% of AUM. Signatories with policy elements that cover separate asset classes without any overlap should provide the combined percentage of their AUM represented by these asset classes. For instance, if their guidelines on environmental factors only cover listed equity assets and their guidelines on social factors only cover private equity assets, signatories should report the percentage of the total AUM that is covered by those policy elements combined. Signatories with asset classes that are covered by multiple policy elements should not double count such asset classes, as this would misrepresent the percentage of their total AUM covered by these policy elements. For instance, if their environmental guidelines apply to their private equity assets and their social guidelines also apply to their private equity assets, when calculating the total AUM covered by these policy elements, signatories should provide the percentage of their AUM that private equity represents overall. Signatories should not count the private equity assets twice, as this would misrepresent the percentage coverage.

Explanatory notes	Explanatory notes		
	This indicator aims to assess the coverage of signatories' policies on stewardship with investees for their actively managed and passive assets (if applicable) and whether the policies cover their entire asset base or a specific asset class, fund or mandate.		
Purpose of indicator	The PRI's Principle 2 recommends that signatories be active owners and incorporate ESG issues into their ownership policies and practices, including their engagement with companies and the exercise of their voting rights (where applicable). This applies to both passive and active strategies and across different asset classes. To ensure a consistent approach, it is considered good practice for the policy(ies) or guidelines to apply to as high a percentage of assets under management as possible, including both internally and externally managed assets, regardless of signatories' investment strategies.		
Additional reporting guidance	The policy on stewardship with investees may be a standalone policy or incorporated into a broader responsible investment policy (or similar).		
Other resources	Further information and resources on stewardship can be found on the PRI's dedicated stewardship webpage.

☐ (C) Direct listed equity holdings in hedge fund portfolios [As above]			[As above]				
Additional context	to your response(s	s):[Volunta	ary free text: la	rge]			

Explanatory notes						
Purpose of indicator	This indicator aims to assess the coverage of a signatory's (proxy) voting policy in its active and passive listed equity and any direct listed equity holdings within hedge fund portfolios, out of those AUM over which they have the discretion to vote. In order to ensure consistency in approach, it is considered good practice to apply (proxy) voting policies to as high a percentage of such assets as possible.					
Additional reporting guidance	Note that this indicator focuses on the AUM coverage of signatories' (proxy) voting policies or guidelines instead of actual votes cast. Signatories' (proxy) voting policies may include reasonable exemptions, such as those derived from voting restrictions outside their control (e.g. share blocking in jurisdictions such as Switzerland or Norway). Since (proxy) voting is part of signatories' overall stewardship with investees, the PRI understands that the AUM coverage reported in this indicator may overlap with that reported in [PGS 8]. In this indicator, 'discretion to vote' refers to the signatory's ability to decide whether and how to cast their vote on management and/or shareholder resolutions at their investee companies. Voting can be done in person, during an Annual or Extraordinary General Meeting (AGM or EGM) or by proxy.					
Other resources	Further information and resources on stewardship can be found on the PRI's dedicated stewardship webpage. For further guidance on (proxy) voting policies, refer to A practical guide to active ownership in listed equity and Making voting count: principle-based voting on shareholder resolutions.

□ (D) Head of deploy□ Specify depart		andatory free text: small]	accountability for responsible investment			

Explanatory notes	
	Having formalised senior-level oversight of and accountability for responsible investment is a minimum requirement for investor signatories at the PRI.
PRI minimum requirements	Assigning oversight to a body or role should not be considered a way to compartmentalise ESG oversight. Instead, it should ensure accountability for embedding ESG considerations within the organisation and its investment processes.
	In order to meet this minimum requirement, at least one of the following roles must have formal oversight of and accountability for responsible investment:

Purpose of indicator	 (A) Board and/or trustees, or equivalent (B) Senior executive-level staff or equivalent (C) Investment committee or equivalent (D) Head of department or equivalent To signal and fulfil their commitment to responsible investment, it is crucial for signatories to have formal senior-level oversight of and accountability for their responsible investment practices. This helps signatories ensure that their organisation implements its policies and achieves its objectives and targets concerning responsible investment. In this indicator, senior-level bodies and roles with 'formal oversight of and accountability for responsible investment' refer to those bodies and roles with management and 					
Additional reporting guidance	governance responsibility for ensuring that the organisation implements its policies and achieves its objectives in relation to responsible investment. This includes the board, trustees, senior executive-level staff, investment committees, heads of department and equivalent. In answer option (A), 'Board members, trustees, or equivalent' may refer to members of the board of non-executive directors, board of trustees, or equivalent bodies, as well as to members of board committees or equivalent. In answer option (B), 'Senior executive-level staff, or equivalent' may include, for example, the signatory organisation's Chief Executive Officer (CEO), Chief Investment Officer (CIO) or Chief Operating Officer (COO), other executive directors or to its partners in the case of private equity funds. In answer option (D), 'Head of department, or equivalent' may refer to senior members of staff who manage entire divisions or teams within the signatory organisation.

Explanatory notes Investors have a legitimate interest in undertaking political engagement to shape the laws and policies that affect them. However, overall political engagement activities may present unforeseen risks for investors, especially when conducted without sufficient visibility or clarity of purpose. Activities that are legal but may still be considered unethical or inconsistent may carry reputational risks when brought to light. In the context of a climate emergency and other global challenges, there is a strong onus on investors to ensure that their political Purpose of indicator engagement is aligned with their public commitments to responsible investment and does not delay or dilute urgent sustainability-related progress. It is thus considered good practice to have robust governance processes to ensure adequate oversight and accountability for signatories' overall political engagement activities and to ensure their alignment with signatories' commitment to the principles of PRI. Signatories who select answer option (A) should provide details on the governance processes or structures that ensure adequate oversight and accountability for signatories' overall political engagement activities, including their alignment with signatories' commitment to the principles of the PRI. The PRI believes that political engagement activities can be responsible when such activities: Additional reporting guidance adhere to the letter and spirit of existing regulations and international best practices; are conducted in line with business principles that ensure integrity and sustainability goals that have been set out in international agreements or national policy targets; preserve the long-term interests of the signatory organisation, including the broad interests of diversified shareholders and those of stakeholders; inspire trust and are grounded in robust governance and transparency; and

O (C) We do not h	nave any internal o	or external roles with responsibil	ity for implementing responsible investment		
Additional context to	o your response(s	:): [Voluntary free text: la	arge]		

Explanatory notes	
	Having at least one person whose role includes responsibility for implementing responsible investment is a minimum requirement for investor signatories at the PRI.
PRI minimum requirements	This role may be covered by someone internal and/or external to the signatory organisation. This role does not have to be dedicated exclusively to, or allocate the majority of their time to, responsible investment activities. Signatories' responsible investment approach may be implemented more successfully if multiple roles are tasked with this responsibility.
	In order for signatories to meet this minimum requirement, at least one of the following roles must have responsibility for implementing their approach to responsible investment: (A) Internal role(s) (B) External investment managers, service providers or other external partners of suppliers
Purpose of indicator	In order to signal and fulfil their commitment to responsible investment, it is crucial for signatories to allocate responsibility for implementing the organisation's responsible investment approach to internal or external individuals, teams and/or departments.
Additional reporting guidance	Responsible investment implementation refers to, for example, conducting ESG-related research, incorporating ESG issues into investment strategies and voting shareholding and conducting stewardship with companies, policy makers or other key stakeholders.
	The implementation of responsible investment does not only apply to dedicated, responsible investment/ESG staff and could be a part of any role's activities.

What responsible	investment com	petencies do you	regularly inc	clude in the training of senior-level	l body(ies) or ro	le(s) in your organisa	tion?
			(1) Board	d members, trustees or equivalent		enior executive-level sittee, head of departm	
(A) Specific competence in climate change mitigation and adaptation							
(B) Specific competence in investors' responsibility to respect human rights							
(C) Specific competence in other systematic sustainability issues							
(D) The regular training of this senior leadership role does not include any of the above responsible investment competencies		О			0		
Additional context t	o your response(s	s): [Volunta	ary free text: la	arge]			

Explanatory notes	
Purpose of indicator	This indicator aims to determine whether signatories include responsible investment-related competences as part of the regular training of their senior leadership. It is important that signatories' senior leadership have sufficient capabilities and competencies to oversee, assess and manage risks and opportunities related to climate change
	mitigation and adaptation, investors' responsibility to respect human rights and other systematic sustainability issues that may be relevant for the signatory organisation.

	It is thus considered good practice for signatory organisations to cover these topics as part of the regular (i.e. at least yearly) training of their senior leadership.
Additional reporting	In this indicator, senior-level bodies and roles may include the board, trustees, senior executive-level staff, investment committees, heads of department and equivalent.
guidance	In this indicator, 'regularly' refers to at least once a year.
Other resources	For further guidance, see An introduction to responsible investment: policy, structure and process.
	Extensive resources on climate change mitigation and adaptation are available on the PRI's dedicated climate change webpage, including introductory guides and technical and engagement guides.
	For dedicated guidance on investors' responsibility to respect human rights, see Why and how investors should act on human rights. Further resources are available on the PRI's dedicated human rights webpage.
	Resources on other environmental, social and governance-related systematic sustainability issues are available on the PRI's website on sustainability issues.

\ , , <u> </u>		-	ting to clients and/or beneficiaries for the majority of o	ur AUM					
Additional context to	o your response(s	s): [Voluntary free text: la	arge]						

Explanatory notes	
Purpose of indicator	Regular reporting to clients and beneficiaries on responsible investment practices is vital to ensure that they can follow up and hold signatories to account, including on any commitments and progress towards those.
	It is thus considered good practice to cover all key responsible investment practices within regular reporting to clients and beneficiaries.
Additional reporting guidance	Information reported should apply to at least 50% of signatories' AUM.

	In this indicator, 'regular' reporting refers to reporting that occurs at least once a year. Regarding answer options (G) and (H), it is important for signatories to report comprehensive information to their clients and/or beneficiaries on whether and how due diligence processes have been undertaken across all human rights, focusing on the most severe issues first and including information on the extent to which the perspectives of affected stakeholders have been taken into account.

The Task Force on Climate-Related Financial Disclosures' (TCFD) recommendations represent a widely adopted set of climate-related financial risk disclosures. They are voluntary for investors to report on (except for certain markets where they are now part of regulatory requirements). Their purpose is to help increase transparency and awareness regarding climate-related risks, providing markets with clear, comprehensive and high-quality information on the impacts of climate change, including the risks and opportunities presented by rising temperatures, climate-related policy and emerging technologies in our changing world. It is considered good practice for signatories to publicly disclose climate-related information in line with the Task Force on Climate-Related Financial Disclosures' (TCFD) recommendations. In this indicator, 'publicly disclose[d] [...] information' refers to information readily available to the general public, either directly accessible from a website or from a portal where anyone can register to obtain access. Links should be provided to publicly available information. If the information is stored in a portal, the link to the relevant registration page should also be provided. If the general public can only access certain information by actively requesting access to it via email or similar, it will not be considered to be publicly disclosed for the purpose of this indicator.

	This indicator aims	o assess how transparent signatories a	re regarding their overall political engagement activities, specifically	y regarding their membership	p in and support for third-			

Purpose of indicator

Many investors are members of, or support, third party organisations such as trade associations or think tanks that conduct political engagement activities. Such third party political engagement activities may present unforeseen risks for investors and their stakeholders, including reputational risks, especially where there is a misalignment between an investor's commitments or political engagement activities and those of the third-party organisations to which it is linked. Thus, it is considered good practice for investors to be aware of and publicly disclose their membership or support for third-party organisations that conduct political engagement activities. It is a sign of robust governance processes regarding political engagement, and the associated transparency helps increase stakeholders' confidence in investors' overall political engagement activities.

party organisations that conduct political engagement. It is considered good practice to disclose this information on an annual basis and to use it as a platform for dialogue.

	In this indicator, 'support' for third-party organisations includes the provision of financial and/or pro-bono support or any other kinds of support.				
Additional reporting guidance	In this indicator, the reference to 'similar bodies that conduct any form of political engagement' would include the PRI In this indicator, signatories can select answer option (A) if they disclose their membership and support for political engagement activities conducted by the PRI. The PRI signatory status alone is not sufficient for selecting answer option (A).				
	For further guidance, see The investor case for responsible political engagement.				
Other resources	See also the OECD report, supported by the PRI, on Regulating corporate political engagement, for an analysis of regulations and soft law instruments that shape corporate political engagement activities across 17 jurisdictions. It includes high-level trends, examines commonalities and differences, and highlights key areas of unregulated influence.

Additional context to your response(s): [Voluntary free text: large]						
Explanatory notes						
	This indicator aims to assess the scope and level of ambition of signatories' approach to organisation-level exclusions.					

The use of exclusions is one of the most widely used responsible investment approaches. For signatories who use this approach, it is considered good practice to align with

Purpose of indicator

international standards when establishing voluntary exclusions.

Additional reporting guidance	Screening is one of several approaches that can be used when considering ESG factors and systematic sustainability issues in portfolio construction and asset selection. Exclusions are often used in combination with other approaches. Signatories may apply negative screening across asset classes to exclude certain sectors, regions, assets or activities from their portfolios. In this indicator, 'organisation-level' exclusions refers to exclusions applied to all AUM instead of to specific segregated or pooled funds or portfolios. In answer option (A), signatories may refer to exclusions regarding, e.g. weapons, alcohol, tobacco or other particular sectors, products or services. In answer option (B), signatories may refer to exclusions due to the circumstances of particular regions or countries, such as conflict, weak governance or a weak rule of law. Signatories who have organisation-level exclusions based on human rights considerations and are aligned with international human rights standards should select answer option (C).

	(1) Listed equity	(2) Fixed income	(3) Private equity	(4) Real estate	(5) Infrastructur e	(6) Hedge funds	(7) Forestry	(8) Farmland
(A) Maximise our portfolio-level risk-adjusted returns. In doing so, we seek to address any risks to overall portfolio performance caused by individual investees' contribution to systematic sustainability issues.	0	0	0	0	0	0	0	0
(B) Maximise our individual investments' risk-adjusted returns. In doing so, we do not seek to address any risks to overall portfolio performance caused by individual investees' contribution to systematic sustainability issues.	0	0	0	0	0	0	0	Ο

Additional context to your response(s): _____ [Voluntary free text: large]

Explanatory notes	
	The purpose of this indicator is to identify the overarching objective of signatories' stewardship approach and to understand if and how it differs between asset classes.
Purpose of indicator	It is considered good practice in stewardship to go beyond maximising the risk-return profile of individual investees and instead prioritise action that will maximise value to the portfolio overall, including action to address systematic sustainability issues, which by definition may lead to portfolio-wide risks even for diversified portfolios.
	Signatories should select the appropriate answer option for each applicable asset class that they invest in based on their primary stewardship objective for the majority of those assets.
	In this indicator, 'primary stewardship objective' refers to the most important objective that would normally take precedence in an organisation's stewardship activities. The PRI recognises there is a significant degree of overlap amongst the answer options, but this indicator seeks to determine the overarching objective.
	Answer option (A) refers to stewardship activities that aim to maximise overall portfolio performance by addressing any systematic sustainability issues which may lead to portfoliowide risks, even for diversified portfolios. This goal could be achieved, for example, by encouraging holdings to avoid externalising harms or by engaging policy makers to seek better regulation and protection of the common assets (e.g. clean water, absence of corruption, a stable climate and/or low inequality) on which portfolio returns rely. This approach to stewardship activities is relevant for all asset classes, including private equity and other private markets assets. All individual investments can contribute to systematic sustainability issues, and all portfolios can be exposed to risks derived from systematic sustainability issues.
Additional reporting guidance	Answer option (B) refers to stewardship activities focused on individual investees that encourage improved management of ESG risks and opportunities. This practice may lead to improvements in portfolio returns but would not generally entail addressing harms caused by one investee that, while potentially a benefit to that investee, costs the portfolio overall. An example may be the legal release of greenhouse gas pollution into the atmosphere in a market where greenhouse gas pollution is not regulated.
	Stewardship can be implemented through a variety of investor stewardship tools, including tools that use investors' influence over current or potential investees or issuers, such as: • engagement with investees (both current and potential), • voting at shareholder meetings, • filling, co-filling, or submitting shareholder resolutions or proposals, • nomination of directors to the board, • leveraging roles on the board or on board committees, • direct oversight of portfolio companies or assets, and • litigation.
	Stewardship can also be implemented by investors using their influence with policy makers and other non-issuer stakeholders, such as:

	policy engagement,			
	engagement with standard setters,			
	engagement with industry groups, pagetistics with and manifering of the stowardship actions of intermediaries in the	a investment shair, a greenst owners appearing outernal managers, limited partners		
	negotiation with and monitoring of the stewardship actions of intermedianes in the engaging general partners,	e investment chain, e.g. asset owners engaging external managers, limited partners		
	 engagement with other stakeholders, e.g. NGOs, workers, communities, and oth 	er rights-holders, and		
	contributions to public goods (e.g. publicly available research) or to public discount	•		
	Many of these tools can be used collaboratively by investors.			
	See Active Ownership 2.0: the evolution stewardship urgently needs for further insights into PRI's framework for more effective stewardship.			
Other resources	See also A Legal Framework for Impact.

PGS 23	Gateway to:	N/A	strategy	2	PLUS

How does your organisation, or the external service providers or external managers acting on your behalf, prioritise the investees or other entities on which to focus its stewardship efforts?

If applicable, describe how this differs between asset classes.

[Voluntary free text: large]

Explanatory notes	
Purpose of indicator	This indicator aims to understand the criteria signatories use to identify and prioritise their stewardship activities in alignment with their primary stewardship objective. As institutional investors may only be able to meaningfully engage with a small number of investees or other entities, it is considered good practice for signatories to have a formal process for identifying and prioritising stewardship activities.
Additional reporting guidance	Signatories may elaborate on whether the following criteria or others are taken into account to prioritise their stewardship activities: • the size of the signatories' holdings in the entity or the size of the asset, portfolio company and/or property, • the materiality of ESG factors on financial and/or operational performance, • systematic sustainability issues, such as climate change or corruption, where investors' exposure is not isolated to one company, sector or portfolio and where harms caused by one part of the portfolio are likely to appear in the form of costs in another. Long-term investors (and financial system beneficiaries), in general, lack the ability to diversify away from such large-scale risks, • the adequacy of public disclosure on ESG factors/performance, • input from clients/beneficiaries, or • other criteria to prioritise investees or other entities on which to focus stewardship efforts In this indicator, 'entity' refers to the target or focus of signatories' stewardship activities, i.e. the entity that signatories are seeking to influence to improve practice or public disclosure. Such an entity could be an investee, for instance, (i) a company (either listed or private, issuing equity or debt), (ii) a sovereign or sub-sovereign issuer (which could be engaged in the context of a sovereign engagement strategy) or (iii) a physical asset (e.g. a directly held property or infrastructure asset). Alternatively, such an entity could also be (i) a government or policy maker (with whom the signatory may engage) or (iii) a non-governmental organisation.

	Signatories that have fully outsourced their stewardship activities to external managers or service providers may comment on how they prioritise their engagement with those external managers/service providers or with policy makers or other stakeholders.
Other resources	Further information and resources on stewardship can be found on the PRI's dedicated stewardship webpage.

O (D) We do not	O (D) We do not join collaborative stewardship efforts					
Additional context to your response(s): [Voluntary free text: large]						

Explanatory notes	
Purpose of indicator	The aim of this indicator is to understand signatories' default position regarding collaborative stewardship. Principle 5 of the PRI, together with several voluntary codes and guidelines (including existing national stewardship codes, the ICGN stewardship principles and the OECD's Responsible Business Conduct for Institutional Investors), encourages investors to collaborate with peers to engage with investees and other stakeholders in order to address matters of collective interest. Collaboration allows PRI signatories to pool knowledge, time and resources and influence investees and other stakeholders on areas of common concern.
Additional reporting guidance	Although for some signatories a combination of answer options may be applicable, for this indicator, signatories should select the answer option that best reflects their default position. Participation in collaborative stewardship efforts can include the use of paid external service providers that pool investor resources to conduct stewardship and are often utilised by smaller investors to facilitate collaboration.
Other resources	See A Legal Framework for Impact for a detailed analysis of the link between investors' fiduciary duties or equivalent obligations and collective action. For further analysis of the legality of collaborations, see the PRI's guidance on the dedicated webpage Addressing system barriers.

	See Active Ownership 2.0: the evolution stewardship urgently needs for further insights into PRI's framework for more effective stewardship. Further information and resources on stewardship can be found on the PRI's dedicated stewardship webpage.

Explanatory notes	Explanatory notes			
Purpose of indicator	This indicator provides signatories with the opportunity to rank the relative importance of different methods for achieving their overarching stewardship objectives.			
Additional reporting	Responses should rank the answer options provided, with 1 signifying the most important and 5 indicating the least important.			
guidance	The term 'internal resources' refers to internal resources used for stewardship activities, such as engagement, that are conducted individually (i.e. not as part of a formal or informal collaboration), including resources from dedicated stewardship or responsible investment teams, portfolio management or investment team staff.			
Other resources	Further information and resources on stewardship can be found on the PRI's dedicated stewardship webpage.

Additional contex	Additional context to your response(s): [Voluntary free text: large]					

Explanatory notes	
Purpose of indicator	This indicator provides signatories with the opportunity to explain the measures they take when partially or fully outsourcing stewardship activities to specialised external service providers to ensure alignment on stewardship objectives, as this is considered good practice.
Additional reporting guidance	Signatories should provide examples of the measures they take when selecting external service providers, when designing engagement mandates and/or consultancy agreements and when monitoring the activities of external service providers. This indicator only applies to signatories that partially or fully outsource their stewardship activities to external service providers. For the purpose of this indicator, signatories should not document their measures in relation to their external investment managers (if applicable). These should be covered in the manager selection, appointment and monitoring (SAM) module.
Other resources	Further information and resources on stewardship can be found on the PRI's dedicated stewardship webpage.

How are your organisation's stewardship activities linked to your investment decision making, and vice versa?

Your stewardship activities and/or investment decision-making may be conducted directly by your organisation and/or by external investment managers or service providers on your behalf.

[Voluntary free text: large]

Explanatory notes	
Purpose of indicator	This indicator provides signatories with the opportunity to explain how stewardship activities are linked to their investment decision-making and vice versa.
Additional reporting guidance	In this indicator, signatories may provide details on the following: (i) the participation of investment decision makers in stewardship discussions, including in company engagement meetings or with management teams for private equity, infrastructure and real estate, as appropriate, (ii) the method via which information is shared between those carrying out stewardship activities and those who are making investment decisions (if the two roles are separated), (iii) how investment decisions are affected by stewardship actions and priorities, (iv) how stewardship actions, including decisions to use different tools, to escalate and/or to participate in collaborations, are affected by investment decisions, (v) whether signatories' communication approach with external managers differs from their communication approach with internal decision-makers, (vi) whether signatories' communication approach with external stewardship service providers differs from that of internal stewardship functions or (vii) any other information relevant to the connection between investment decision-making and stewardship.

1 1	□ (C) We ensure consistency with our voting policy by reviewing external service providers' voting recommendations only after voting has been executed [As above]						
O (D) We do not review external service providers' voting recommendations							
O (E) Not applicable; we do not use external service providers to give voting recommendations							
Additional context to	o your response(s	s): [Voluntary free text: la	arge]				

Explanatory notes	
Purpose of indicator	The purpose of this indicator is to determine whether signatories that outsource voting recommendations to external service providers review those recommendations before using them as input to voting to maintain oversight and ensure alignment of the expectations stipulated in a voting policy. Reviewing all voting recommendations for controversial and high-profile issues, as well as where the policy application may be unclear before voting is executed, is considered good practice.
Additional reporting guidance	Policy(ies) or guidelines on (proxy) voting outline how signatories approach voting decisions, including how ESG factors influence voting decisions and for which types of votes ESG is considered. It may be a standalone policy or guideline or incorporated into a broader responsible investment policy, policy on stewardship or similar. In this indicator, 'controversial and high-profile' refers to votes that have received significant attention amongst institutional investors (such as high levels of discussion within a collaborative engagement or public discussion on social networks like LinkedIn), in the media (for example, in the responsible investment trade press or mainstream financial media), or otherwise have had attention drawn to them (for example, by proxy agencies, investor networks or organisations such as the PRI). In this indicator, 'where the application of our voting policy is unclear' refers to situations where the application of a signatory's voting policy is ambiguous and could be interpreted by the external service provider in more than one way. Signatories who chose to follow external service providers' 'off the shelf' voting recommendations, and do not review those recommendations against their internal policies, should select answer option D.
Other resources	Further information and resources on stewardship can be found on the PRI's dedicated stewardship webpage. For further guidance, refer to A practical guide to active ownership in listed equity.

O (D) We do not r	ecall our securitie	s for voting purposes					
O (E) Not applicable; we do not have a securities lending programme							
Additional context to your response(s): [Voluntary free text: large]							

Explanatory notes	
Purpose of indicator	This indicator expands on a signatory's policy related to its securities lending programme and aims to understand how the signatory actively manages its ownership rights where they may be inhibited by securities lending.
Additional reporting guidance	In this indicator, the PRI scores signatories based on the degree to which they maintain control of voting for securities lent out as part of a securities lending programme. This indicator does not apply to signatories that do not have a securities lending programme; thus, signatories are not penalised for not having such a programme.
Other resources	Further information and resources on stewardship can be found on the PRI's dedicated stewardship webpage. For further guidance, refer to A practical guide to active ownership in listed equity. The ICGN Guidance on Securities Lending is an additional source of guidance for investors interested in initiating a share lending programme that does not impede responsible voting activities.

For the majority of votes cast over which you have discretion to vote, which of the following best describes your decision making approach regarding shareholder resolutions (or that of your external service provider(s) if decision making is delegated to them)?

Select the answer option that reflects your approach for the majority of votes cast across all your listed equity and hedge funds AUM over which you have the discretion to vote.

- O (A) We vote in favour of resolutions expected to advance progress on our stewardship priorities, including affirming a company's good practice or prior commitment
- O (B) We vote in favour of resolutions expected to advance progress on our stewardship priorities, but only if the investee company has not already publicly committed to the action(s) requested in the proposal
- O (C) We vote in favour of shareholder resolutions only as an escalation measure
- O (D) We vote in favour of the investee company management's recommendations by default
- O (E) Not applicable; we do not vote on shareholder resolutions

Additional context to your response(s): _____ [Voluntary free text: large]

Explanatory notes				
Purpose of indicator	The purpose of this indicator is to assess the approach to (proxy) voting on shareholder resolutions and the degree to which the achievement of stewardship objectives is prioritise over other factors. It aims to understand the signatory's regular approach or default position when voting on shareholder resolutions.			
	In this indicator, 'discretion to vote' refers to the signatory's ability to decide <i>whether and how</i> to cast their vote on resolutions submitted by shareholders at their investee companies. Voting can be done in person, during an annual or extraordinary general meeting (AGM or EGM) or by proxy.			
Additional reporting guidance	The PRI recognises that several other factors will form part of individual decisions; the answer option that best represents a signatory's standard approach should be selected.			
	In answer option (A), the reference to 'our stewardship priorities' refers to the signatory's (and not the external service provider's) stewardship priorities. Signatories should ensure that any delegation of their stewardship activities is aligned with their stewardship priorities.			

	Further information and resources on stewardship can be found on the PRI's dedicated ste	ewardship webpage.	
Other resources	For further guidance on shareholder resolutions, refer to Making voting count: principle-based voting on shareholder resolutions.		
	For further guidance, refer to A practical guide to active ownership in listed equity.

` '		ly communicate our voting intent st any (proxy) votes during the re	•					
Additional context to	o your response(s	s): [Voluntary free text: la	urge]					

Explanatory notes	
Purpose of indicator	The purpose of this indicator is to determine whether and how a signatory (or external service provider(s) acting on its behalf) pre-declared votes prior to AGMs/EGMs, considering the level of disclosure (public or private). It is considered good practice for a signatory (or its external service provider(s) acting on its behalf) to publicly pre-declare their voting intentions, in accordance with relevant securities laws, as a means of improving transparency. Among other things, this improves investor accountability to clients and/or beneficiaries.
	Beyond research and casting votes, voting involves communicating with investee companies before and after the AGMs/EGMs. When possible, investors should raise concerns before voting against management or abstaining to initiate dialogue and receive additional information. In addition, investors should consider publicly sharing the rationale for their votes against management or abstentions and explain their views to interested companies directly, either voluntarily or following a company's direct request.
Additional reporting guidance	If a signatory has publicly and/or privately communicated their voting intentions at least once during the reporting year, answer options A, B and/or C can be selected, respectively.

	The PRI vote declaration system was set up for the first time for the 2017 voting season and is available within the Resolution Database of the PRI Collaboration Platform. The system allows investors to pre-declare their voting intentions on ESG resolutions filed by signatories. It is a voluntary opportunity for investors to declare to clients, beneficiaries and other stakeholders how they intend to vote on shareholder resolutions related to environmental, social and corporate governance issues in advance of proxy votes. The system aims to increase transparency across the industry in line with Principles 2 and 6 and the PRI's 10-year Blueprint.				
	Further information and resources on stewardship can be found on the PRI's dedicated stewardship webpage.				
	For further guidance on shareholder resolutions, refer to Making voting count: principle-ba	ased voting on shareholder resolutions.			
Other resources	See An introduction to responsible investment: listed equity for more information on voting	g.			
	See also the PRI's Resolution Database, where PRI signatories can publicly declare how they intend to vote on ESG-related shareholder resolutions and find information about upcoming resolutions.

	Explain why:	[Mandatory	free text: medium]				
Add	ditional context t	o your response(s	s): [Voluntary free text: la	arge]			

Explanatory notes	
Purpose of indicator	The purpose of the indicator is to gauge the level of transparency and how readily and easily available the information is to stakeholders. It is considered good practice for signatories and/or the external service provider(s) acting on their behalf to communicate their voting decisions publicly and to communicate to companies the rationale for abstaining or voting against management recommendations.
	In this indicator, 'in a central source" refers to a publicly accessible location (such as a website) containing voting decisions across all investees and all funds, indicating if some votes (e.g. certain funds) within the signatory's control are voted differently from others, where applicable.
Additional reporting guidance	In this indicator, the proportion of votes should be calculated out of the AUM over which signatories have the discretion to vote. In this indicator, 'discretion to vote' refers to the signatory's ability to decide <i>whether and how</i> to cast their vote on management and/or shareholder resolutions at their investee companies. Voting can be done in person, during an annual or extraordinary general meeting (AGM or EGM) or by proxy.

	Further information and resources on stewardship can be found on the PRI's dedicated stewardship webpage.

Explanatory notes

Purpose of indicator	This indicator aims to understand whether a signatory or an external service provider acting on its behalf communicates the rationale for abstaining or voting against management recommendations or ESG-related shareholder resolutions. It is considered good practice to consistently communicate the rationale for all decisions directly to the company and publicly.				
Additional reporting guidance	Signatories who publicly or privately pre-declare the rationale of their voting intentions, as indicated in [PGS 32], can select A or B, respectively. In this indicator, the proportion of votes reported in columns (1) and (2) should be out of the AUM over which signatories have the discretion to vote. In this indicator, 'discretion to vote' refers to the signatory's ability to decide whether and how to cast their vote on management and/or shareholder resolutions at their investee companies. Voting can be done in person, during an annual or extraordinary general meeting (AGM or EGM) or by proxy. The PRI understands that signatories may not consider all ESG-related shareholder resolutions conducive to improving a company's ESG practices and thus may have legitimate reasons to vote against them. Communicating the rationale for their voting decisions, including why the resolution was not considered adequate, is expected to help improve the quality of the ESG-related resolutions filed by shareholders in the future and help management better understand the position of their shareholders.				
Other resources	Further information and resources on stewardship can be found on the PRI's dedicated stewardship webpage. For further guidance on good-quality voting disclosure, refer to A practical guide to active ownership in listed equity.

How does your organisation ensure vote confirmation, i.e. that your votes have been cast and counted correctly?

Through an example, explain what measure(s) your organisation has in place to overcome any bureaucratic and logistical obstacles in the voting chain and confirmation process.

[Free text: large]

Explanatory notes	
Purpose of indicator	This indicator provides signatories with the opportunity to describe what measures they have put in place to enhance integrity and efficiency in the voting chain, leading to improved transparency.
Additional reporting guidance	The voting chain usually includes multiple actors, from voting agents to custodians and sub-custodians. Among other issues, the complexity of this structure makes it difficult for institutional investors to receive final confirmation that their votes have reached the companies and been counted. In cases where an external service provider is used or involved indirectly, signatories can use this question to describe how they audit the votes executed by their external service provider (i.e. the outcomes of a voting audit that checks whether votes were cast as intended and reached the companies) and how they involved all the intermediaries within the voting chain (i.e. custodians, sub-custodians, voting agencies and registrars).

PGS 36	Gateway to:	N/A	Stewardship: Escalation	2	CORE

For your listed equity holdings, what escalation measures did your organisation, or the external investment managers or service providers acting on your behalf, use in the past three years?

	(1) Listed equity	(2) Direct listed equity holdings in hedge fund portfolios
(A) Joining or broadening an existing collaborative engagement or creating a new one		
(B) Filing, co-filing, and/or submitting a shareholder resolution or proposal		
(C) Publicly engaging the entity, e.g. signing an open letter		
(D) Voting against the re-election of one or more board directors		
(E) Voting against the chair of the board of directors, or equivalent, e.g. lead independent director		
(F) Divesting		
(G) Litigation		

(H) Other	Specify: [Mandatory free text: small]	Specify: [Mandatory free text: small]		
(I) In the past three years, we did not use any of the above escalation measures for our listed equity holdings	O Explain why: [Voluntary free text: large]	O Explain why: [Voluntary free text: large]		
Additional context to your response(s): [Voluntary free text: large]				

Explanatory notes				
Purpose of indicator	If initial stewardship efforts are unsuccessful and do not achieve the desired objectives after a certain period, investors can use escalation strategies to try to increase the likelihood of their objectives being achieved. The aim of this indicator is to determine which of these escalation measures signatories have used in the past three years. It is considered good practice for signatories to use various stewardship tools to improve their ability to further their stewardship priorities.			
	Action may be taken directly by the signatory or by their external service providers or external investment managers. Signatories whose stewardship activities are managed externally by multiple external investment managers and/or service providers should provide an aggregated response for those assets, indicating what applies to most assets.			
Additional reporting guidance	In this indicator, an 'escalation measure' refers to an approach an investor takes if initial stewardship approaches are unsuccessful at achieving its objectives over a given time period.			
guidance	In this indicator, 'broadening an existing collaborative engagement' refers to increasing the scope and intensity of a collaborative engagement. For example, signatories could increase the scope to cover the company's upstream or downstream value chain (e.g. suppliers) and intensity by encouraging peer investors to participate in an engagement.			
	In answer option (C), 'signing an open letter' refers to drafting or signing a public communication to an investee company in furtherance of stewardship priorities.			
0.11	Further information and resources on stewardship can be found on the PRI's dedicated stewardship webpage.			
Other resources	Country-specific guidance on the United Kingdom, South Africa and Germany is available on the PRI's webpage on Addressing system barriers.

For your corporate fixed income assets, what escalation measures did your organisation, or the external investment managers or service providers acting on your behalf, use in the past three years?						
, , ,	•	ting collaborative engagement o	r creating a new one			
\ , ,		e.g. signing an open letter				
, ,	□ (C) Not investing□ (D) Reducing exposure to the investee entity					
☐ (E) Divesting	chosare to the live	estee entity				
☐ (E) Litigation						
☐ (G) Other						
\ '	[Mandatory free	text: small]				
O (H) In the past three years, we did not use any of the above escalation measures for our corporate fixed income assets Explain why: [Voluntary free text: large]						
Additional context to your response(s): [Voluntary free text: large]						

Explanatory notes				
Purpose of indicator	If initial stewardship efforts are unsuccessful and do not achieve the desired objectives after a certain period, signatories can use escalation strategies to try to increase the likelihood of their objectives being achieved. The aim of this indicator is to determine which escalation measures signatories have used in the past three years. It is considered good practice for signatories to use various stewardship tools to improve their ability to further their stewardship priorities.			
Additional reporting guidance	Action may be taken directly by the signatory or by their external service providers or external investment managers. Signatories whose stewardship activities are managed externally by multiple external investment managers and/or service providers should provide an aggregated response for those assets, indicating what applies to most assets. In this indicator, an 'escalation measure' refers to an approach an investor takes if initial stewardship approaches are unsuccessful at achieving its objectives over a given time period.			
	period.			

	In this indicator, 'broadening an existing collaborative engagement' refers to increasing the scope and intensity of a collaborative engagement. For example, signatories could increase the scope to cover the company's upstream or downstream value chain (e.g. suppliers) and intensity by encouraging peer investors to participate.		
	In answer option (B), 'signing an open letter' refers to drafting or signing a public communication to an investee company in furtherance of stewardship priorities.		
	For further guidance on ESG engagement for fixed income investors, see ESG engagement for fixed income investors: Managing risks, enhancing returns.		
Other resources	Further information and resources on stewardship can be found on the PRI's dedicated stewardship webpage.		
	Country-specific guidance on the United Kingdom, South Africa and Germany is available on the PRI's webpage Addressing system barriers.

VOLUNTARY TO DISCLOSE

Describe your approach to escalation for your SSA and/or private debt fixed income assets.

	Approach to escalation	
(A) SSA	[Voluntary free text: large]	
(B) Private debt	[As above]	

Explanatory notes		
Purpose of indicator	If initial stewardship efforts are unsuccessful and do not achieve the desired objectives after a certain period, signatories can use escalation strategies to try to increase the likelihood of their objectives being achieved.	
	The aim of this indicator is for signatories to be able to showcase their approach to any escalation in SSA and private debt, including any escalation measures used.	
	In this indicator, an 'escalation measure' refers to an approach an investor takes if initial stewardship approaches are unsuccessful at achieving its objectives over a given time period.	
Additional reporting guidance	 Examples of steps that investors can take as escalation measures differ by asset class, but include: Joining or broadening an existing collaborative engagement or creating a new one, Publicly engaging the entity, e.g. by signing an open letter, Not investing, Reducing exposure to the investee entity, Divesting, or Litigation

STEWARDSHIP: ENGAGEMENT WITH POLICY MAKERS [PGS 39, PGS 39.1, PGS 39.2]

Indicator ID	Dependent on:	00 8, 00 9	Sub-section Stewardship: Engagement with policy	PRI Principle	Type of indicator	
PGS 39	Gateway to:	PGS 39.1, PGS 39.2	makers	2	CORE	
	Did your organisation, or the external investment managers or service providers acting on your behalf, engage with policy makers as part of your responsible investment approach during the reporting year?					
, ,						
☐ (C) Yes, we we	(-, -, -, -, -, -, -, -, -, -, -, -, -, -					
_	organisations, that engage with policy makers, excluding the PRI O (D) We did not engage with policy makers directly or indirectly during the reporting year beyond our membership in the PRI					
Explain why: [Voluntary free text: medium]						
Additional context to your response(s): [Voluntary free text: large]						

Explanatory notes			
Purpose of indicator	The purpose of this indicator is to determine how signatories engage with policy makers and regulators (if at all) as part of their responsible investment approach. This is considered good practice, as public policy critically affects the ability of long-term investors to generate sustainable returns and create value.		
Additional reporting guidance	In this indicator, 'engagement with policy makers' refers to investors' direct or indirect dialogue with regulators or other policy makers to contribute to specific policy developments. It may include participating in 'sign-on' letters, responding to policy consultations, providing technical input via government- or regulator-backed working groups, engaging policy makers on the investor's own initiative or other ways of providing input into policy development. Engagement with policy makers may be conducted individually or collaboratively by investors. It may also be conducted on behalf of investors by third-party organisations such as trade associations, think tanks, external investment managers, service providers or non-profit organisations. Answer option A includes signatories that, during the reporting year, individually engaged with policy makers or regulators (i.e. not as part of wider groups or initiatives) and without the intermediation of a third-party organisation such as a trade association or non-profit organisation.		

Answer option B includes signatories that, during the reporting year, led or actively participated in the PRI policy activities or the policy activities of similar stakeholder organisations, such as the policy track of the UN Net Zero Asset Owner Alliance or the Investor Agenda, the policy programme of the Institutional Investors Group on Climate Change, Ceres, the Investors Group on Climate Change Australia/New Zealand (IGCC) and the Asia Investors Group on Climate Change (AIGCC); or the policy activities of trade bodies and industry groups on sustainability topics. For private markets investors, this could refer to the policy activities of professional or industry associations at the national, regional or international level, such as the British Private Equity and Venture Capital Association (BVCA), the National Venture Capital Association (NVCA), or the Institutional Limited Partners Association (ILPA). For infrastructure investors specifically, this could include the Long-Term Infrastructure Investors Association (LTIIA) or the Global Infrastructure Investor Association (GIIA). In answer option B, 'leadership or active participation' in working groups or collaborative initiatives applies to signatories who are responsible for driving the relevant engagement forward, e.g. by being the main point of contact between the working group or collaborative initiative and the policy makers or regulators engaged, or by participating in preparatory calls and engagement meetings with policy makers. In answer option C, 'support' of third-party organisations includes the provision of financial and/or pro-bono support or any other kinds of support. Engagement with policy makers may be conducted via paid external service providers that pool investor resources to conduct stewardship, including engagement with policy makers. These are often used by investors regardless of size. Signatories who use these services may select answer options (A) and/or (B) in this indicator, as applicable, if they pay their external service providers for a specific policy engagement service. If no specific policy engagement service is paid for, signatories may still select answer option (C) if applicable. For further guidance, see The investor case for responsible political engagement and Our policy approach. The Global Policy Reference Group, convened by the PRI, supports signatories' public policy engagement with policy makers on responsible investment topics in alignment with the PRI's 6 principles. Other resources See also the PRI's policy briefings to aid signatories' understanding of recent developments in responsible investment policy. See also the PRI's public responses to policy consultations. For further research, see the PRI's regulation database, which documents existing financial regulations and policies where ESG factors have been considered alongside investment and other economic areas. Explanatory notes	Explanatory notes		
Purpose of indicator This indicator aims to assess how investors engage with policy makers and the quality and depth of this engagement. It is considered good practice to engage with policy support a more sustainable financial system by providing technical expertise and proactively engaging on relevant policy topics.			
Additional reporting guidance	In this indicator, 'engagement with policy makers' refers to investors' direct or indirect dialogue with regulators or other policy makers to contribute to specific policy developments. It may include participating in 'sign-on' letters, responding to policy consultations, providing technical input via government- or regulator-backed working groups, engaging policy makers on the investor's own initiative or other ways of providing input into policy development. Engagement with policy makers may be conducted individually or collaboratively by investors. It may also be conducted on behalf of investors by third-party organisations such as trade associations, think tanks, external investment managers, service providers or non-profit organisations.		
	In the description fields, signatories can describe how they engage with policy makers, noting that there are a variety of ways to do so, dependent on the policy environment(s) in which signatories operate. They may also elaborate on the topics they engage on, which may include pension regulation, stewardship, ESG incorporation, disclosure requirements (e.g. corporate sustainability disclosure standards), or ESG topics relevant to the signatory's investment portfolio.		

	In answer option A, 'sign-on' letters refers to pre-drafted petitions or other documents directed at policy makers or regulators, which signatories can support by affixing their signature.
	In answer option D, 'we engaged policy makers on our own initiative' refers to one-to-one engagements and direct meetings with policy makers arranged directly by the signatory.
	Engagement with policy makers may be conducted via paid external service providers that pool investor resources to conduct stewardship, including engagement with policy makers. These are often used by investors regardless of size.
	For further guidance, see The investor case for responsible political engagement and Our policy approach.
Other resources	The Global Policy Reference Group, convened by the PRI, supports signatories' public policy engagement with policy makers on responsible investment topics in alignment with the PRI's 6 principles.
Other resources	See also the PRI's policy briefings to aid signatories' understanding of recent developments in responsible investment policy.
	See also the PRI's public responses to policy consultations. For further research, see the PRI's regulation database, which documents existing financial regulations and policies where ESG factors have been considered alongside investment and other economic areas.

Explanatory notes		
Purpose of indicator	The purpose of this indicator is to assess how transparent signatories are regarding the engagement with policy makers conducted as part of their responsible investment approach. It is considered good practice to disclose details on engagement with policy makers on an annual basis and to use this as a platform for dialogue.	
Additional reporting guidance	In this indicator, 'engagement with policy makers' refers to investors' direct or indirect dialogue with regulators or other policy makers to contribute to specific policy developments. It may include participating in 'sign-on' letters, responding to policy consultations, providing technical input via government- or regulator-backed working groups, engaging policy makers on the investor's own initiative or other ways of providing input into policy development. Engagement with policy makers may be conducted individually or collaboratively by investors. It may also be conducted on behalf of investors by third-party organisations such as trade associations, think tanks, external investment managers, service providers or non-profit organisations. In answer option A, 'policy positions' refers to the views of a signatory organisation on policy topics relevant to their responsible investment approach. Only signatories who publicly disclosed all their policy positions can select this option. For an example of disclosures expressed through consultation responses or sign-on letters on policy topics relevant to	
	responsible investment, see the PRI's Consultations and letters webpage.	

	In answer option B, 'details' of engagements refers to a description of the policy position promoted by signatories during their engagement(s) with policy makers. It can, for example, refer to the support or opposition to a particular policy reform, with the arguments used and alternative recommendations proposed.			
	For further guidance, see The investor case for responsible political engagement and Our p	policy approach.		
Other resources	The Global Policy Reference Group, convened by the PRI, supports signatories' public policy engagement with policy makers on responsible investment topics in alignment with the PRI's 6 principles.			
Other resources	See also the PRI's policy briefings to aid signatories' understanding of recent developments in responsible investment policy.			
	See also the PRI's public responses to policy consultations. For further research, see the PRI's Regulation Database, which documents existing financial regulations and policies where ESG factors have been considered alongside investment and other economic areas.

Explanatory notes				
Purpose of indicator	This indicator provides signatories with the opportunity to share examples of successful stewardship efforts that were conducted during the reporting year.			
Additional reporting	In this indicator, 'entity' refers to the target or focus of signatories' stewardship activities, i.e. the entity that signatories are seeking to influence for the purpose of improving practice or public disclosure. Such an entity could be an investee, for instance, (i) a company (either listed or private, issuing equity or debt), (ii) a sovereign or sub-sovereign issuer (which could be engaged in the context of a sovereign engagement strategy) or (iii) a physical asset (e.g. a directly held property or infrastructure asset). Alternatively, such an entity could also be (i) a government or policy maker (with whom the signatory may engage) or (ii) a non-governmental organisation. As far as is practicable, examples should be chosen to provide a rounded picture of signatories' stewardship activities. Examples can be focused on a theme, or they may be			
guidance	stewardship activities with a specific entity. In column (2), 'Primary focus of stewardship activity', responses should clarify whether signatories' stewardship activities were primarily focused on environmental, social or governance factors or any combination of those.			

	In column (4), 'Description of the activity and what was achieved', responses should describe the stewardship activity signatories participated in during the reporting year and what it achieved. For collaborative activities, signatories should include details on their individual contributions to the collective effort. Examples for fixed income SSA and/or securitised holdings: • For SSA investors, engagement may be with entities such as the following: sovereign representatives, non-ruling parties, originators and primary dealers, ESG index and
	data providers, multinational companies/state-owned enterprises (SOEs), supranational organisations, business associations, media, NGOs, think tanks and academic institutions. • For securitised products, engagement may be either with the CLO manager or for RMBS, CMBS, ABS, etc., with the deal manager, originator, sponsor or servicer.

CLIMATE CHANGE [PGS 41, PGS 41.1, PGS 42, PGS 43, PGS 44, PGS 45, PGS 46]

Indicator ID	Dependent on:	N/A	Sub-section	PRI Principle	Type of indicator
PGS 41	Gateway to:	PGS 41.1	Climate change	General	CORE
Has your organisation identified climate-related risks and opportunities affecting your investments?					
□ (A) Yes, within our standard planning horizon Specify the risks and opportunities identified and your relevant standard planning horizon: [Mandatory free text: large]					
. , ,	☐ (B) Yes, beyond our standard planning horizon Specify the risks and opportunities identified and your relevant standard planning horizon: [Mandatory free text: large]				
O (C) No, we have not identified climate-related risks and/or opportunities affecting our investments Explain why: [Mandatory free text: large]					
Additional context to your response(s): [Voluntary free text: large]					

Explanatory notes	
	This indicator aims to assess the extent to which signatories are aware of the climate-related risks and opportunities relevant to their investments. As per the TCFD Recommendations (Strategy a), it is considered good practice to conduct regular and rigorous analyses of all relevant risks and opportunities, including those related to the climate, and to incorporate them into investment decision-making and stewardship activities.
Purpose of indicator	Investors are directly and indirectly exposed to policy, legal, technology, market, and reputation-related transition risks from climate change, as well as to acute and chronic physical risks. Investors can also benefit from climate-related opportunities related to resource efficiency, energy services and resilience-related products and services. These risks and opportunities may affect signatories' (and investees') revenues, expenditures, assets and liabilities, capital and financing.
Additional reporting guidance	Aligned with TCFD Recommendations: Strategy a). According to this TCFD Recommendation, entities should describe what they consider to be the relevant planning horizons; and a description of the specific climate-related issues potentially arising in each time horizon that could have a material financial impact on the organisation.

	Signatories should refer to any risks and opportunities they have identified within and beyond their standard planning horizon. In answer options (A) and (B), the interpre 'standard planning horizon' will depend on the signatory and their investments. There may also be a mix of planning horizons within one specific signatory. Responses s include details at the investment portfolio level, asset class, sector and/or region and should refer to both physical and transition risks.				
	While the common perception is that climate-related risks are 'long term', arising in 10, 20, or 30 years, this may not be the case. Policies, technology innovation and markets at likely to adjust and shift in advance of many foreseeable climate trends. Likewise, more frequent and severe storms, floods and droughts are occurring today. Organisations, therefore, should carefully consider the time horizon they use to evaluate their exposures and possibly assess them over a range of time horizons to capture potential exposures arising in the short, medium and longer term.				
	For guidance on and examples of climate-related risks and opportunities, see the Recommendations of the TCFD.	endations of the Task Force on Climate-related Financial Disclosures and its Annex:			
	See also PRI's Climate risk: An investor resource guide, designed to help investors navigate the many resources at their disposal and answer common questions about climate risk management.

Does your organisation integrate climate-related risks and opportunities affecting your investments in its overall investment strategy, financial planning and (if relevant) products? Signatories should provide information on their transition plans, if available. A transition plan is an aspect of an organisation's overall strategy that lays out a set of targets and actions supporting its transition toward a low-carbon economy, including actions such as reducing its greenhouse gas emissions.					
 O (A) Yes, our overall investment strategy, financial planning and (if relevant) products integrate climate-related risks and opportunities Describe how climate-related risks and opportunities have affected or are expected to affect your investment strategy, financial planning, and (if relevant) products: [Mandatory free text: large] O (B) No, our organisation has not yet integrated climate-related risks and opportunities into its investment strategy, financial planning and (if relevant) products Explain why: [Mandatory free text: large] 					
Additional context to your response(s): [Voluntary free text: large]					

Explanatory notes	
Purpose of indicator	This indicator aims to understand how signatories' analysis of climate-related risks and opportunities is factored into their overall investment strategy, financial planning, and (if relevant) products.
	For signatories to fully benefit from assessing climate-related risks and opportunities, they should reflect the results of the assessment in the organisation's strategy, financial planning and (if relevant) products.
	Aligned with TCFD Recommendations: Strategy b)
Additional reporting guidance	Signatories may select answer option (A) if they have incorporated climate risks and opportunities into at least some of their products, if relevant (as well as to their investment strategy or financial planning). Signatories do not need to have done so for <i>all</i> their products to select this answer option.
	Signatories may also select answer option (A) if they do not offer any products but integrate climate-related risks and opportunities into their investment strategy and financial planning.

	Signatories who select answer option (A) should provide information on their transition plans, if available. A transition plan is an aspect of an organisation's overall strat out a set of targets and actions supporting its transition toward a low-carbon economy, including actions such as reducing its GHG emissions.				
	For guidance on and examples of climate-related risks and opportunities, see the Recommendations of the Task Force on Climate-related Financial Disclosures and its Annex: Implementing the Recommendations of the TCFD.				
	See also PRI's Climate risk: An investor resource guide, designed to help investors navigate the many resources at their disposal and answer common questions about climate risk management.

Explanatory notes

Copyright © PRI Association Limited (2025).

	Investors frequently find that the carbon emissions associated with their portfolios are disproportionately concentrated in certain high-emitting sectors. While the specifics vary with the portfolio, investors whose holdings broadly mirror the market typically find that these highest emitting sectors include oil and gas, utilities, transportation and materials firms.
	Many investors thus adopt strategies that target high-emitting sectors to address climate-related risks and take advantage of climate-related opportunities. Such strategies vary widely among investors and may include the following:
Purpose of indicator	• Stewardship activities with investees (e.g. engaging with oil and gas companies to ensure timely adoption and implementation of transition plans), with relevant policy makers, or other key stakeholders.
	Capital allocation, including changes to security selection (e.g. to invest in the most carbon-efficient companies within a sector), changes to asset allocation (e.g., to shift investments from certain subindustries into others) or divestment from specific companies or sectors.
	This indicator aims to understand whether and how signatories have designed a climate strategy addressing high-emitting sectors.
Additional reporting guidance	Signatories responding to this indicator may describe their strategy(ies) in column (1) and/or provide a link to their strategy(ies) in column (2), as preferred by the signatory.

Has your organisation assessed the resilience of its investment strategy in different climate scenarios, including one in which the average temperature rise is held to below 2 degrees Celsius (preferably to 1.5 degrees Celsius) above pre-industrial levels?					
☐ (B) Yes, using☐ (C) Yes, using☐ (D) Yes, using☐ Specify:	the One Earth Clir the International E other scenarios _ [Mandatory free	mate Model scenario Energy Agency (IEA) Net Zero so text: medium]	cenario (FPS) or Required Policy Scenario (RPS) cenario categy in different climate scenarios, including one that	at holds temperature ris	se to below 2
Additional context to your response(s): [Voluntary free text: large]					

Explanatory notes	
Purpose of indicator	The purpose of this indicator is to clarify whether and how a signatory's investment strategy is informed by considerations of how climate change may develop. Investors can use scenario analysis results to inform asset allocation, security selection, research processes and stewardship.
	For signatories to appropriately incorporate the potential effects of climate-related risks and opportunities into their investment strategy, it is considered good practice to conduct scenario analysis.
	Aligned with TCFD Recommendations: Strategy c)
Additional reporting guidance	Scenario analysis consists of identifying and assessing the potential implications of plausible future states, under conditions of uncertainty. Scenarios are hypothetical constructs and not designed to deliver precise outcomes or forecasts. Instead, they provide a way for organisations to consider how the future might look if certain trends continue or certain conditions are met. For example, in the case of climate change, scenarios allow an organisation to explore and understand how various combinations of climate-related risks, both transition and physical risks, may affect its businesses, strategies, and financial performance over time. Scenario analysis can be qualitative, relying on descriptive and written narratives, or quantitative, relying on numerical data and models, or some combination of both.

	While it can be done with the help of specialised research providers, scenario analysis can also be done by portfolio managers and investment officers as they develop their overall beliefs about their investment context. Some investors use formal scenarios developed by non-governmental institutions to examine the likely development of individual companies and sectors. Others follow climate science and develop their convictions about the likely investment-relevant effects of climate impacts such as sea-level rise, water scarcity and human migration.					
	See also the PRI's Climate risk: An investor resource guide, designed to help investors navigate the many resources at their disposal and answer common questions about climate risk management, including a Q&A on scenario analysis under its section on 'Strategy'.					
For further guidance on the climate scenarios in (A-C), see: Inevitable Policy Response Forecast Policy Scenario (FPS) or Required Policy Scenario (RPS) One Earth Climate Model scenario International Energy Agency (IEA) Net Zero scenario For further TCFD guidance on scenario analysis, see The Use of Scenario Analysis in Disclosure of Climate-Related Risks and Opportunities. For further information about the Inevitable Policy Response, see Preparing investors for the Inevitable Policy Response to climate change. For further detail on the consequences of a 4°C or higher scenario, see the Intergovernmental Panel on Climate Change's (IPCC's) Fifth Assessment Report. Converting scientific assessment into financial metrics is challenging, particularly for a failure to transition scenario, as the results are wildly sensitive to underlyit However, the TCFD's Annex: Implementing the Recommendations of the TCFD provides a framework for assessing physical climate risk and distinguishes between the provided on the consequence on Physical Climate risk and distinguishes between the provided on the consequence on Physical Climate risk and distinguishes between the provided on the consequence on Physical Climate risk and distinguishes between the provided on the consequence on Physical Climate risk and distinguishes between the provided on the consequence on Physical Climate risk and distinguishes between the provided on the consequence on Physical Climate risk and distinguishes between the provided on the consequence of the provided on Physical Climate risk and distinguishes between the provided on the consequence of the provided on Physical Climate risk and distinguishes between the provided on the provided on the provided on Physical Climate risk and distinguishes between the provided on the provi

O (K) Our organisation did not use or publicly disclose any climate risk metrics or variables affecting our investments during the reporting year Explain why: [Voluntary free text: medium]					
Additional context to your response(s): [Voluntary free text: large]					

Explanatory notes	
Purpose of indicator	Different metrics can be used to gauge signatories' exposure to climate risks or opportunities. This indicator aims to gain insight into any metrics signatories have established to manage the climate risks associated with their investments.
	It is considered good practice for organisations to establish and track climate risk-related metrics, helping them incorporate relevant and up-to-date risk considerations into their investment strategy and decisions.
	Aligned with TCFD Recommendations: Risk management a), b), c), and Metrics and targets a)
Additional reporting guidance	'Physical risks' affect all asset classes. Some investors may restrict their definition of securities affected by physical risk to sectors most directly exposed to extreme weather, such as real estate and infrastructure. However, extreme weather is, for example, also disrupting the production of raw materials, complicating supply chain management for manufacturers. Investors who have analysed this aspect of physical risk may have a broader definition of the securities affected.

'Internal carbon price' refers to an internally developed estimated cost of carbon emissions. Carbon prices should be assumed to increase over time to reflect a decreasing carbon budget, that is, the level of emissions the planet can tolerate each year. Carbon price assumptions should be aligned with temperature goals used in an investor's scenario analysis. 'Total carbon emissions' refers to the absolute greenhouse gas emissions associated with a portfolio. It excludes: upstream emissions from the company's supply chain, and other downstream emissions different from the financed emissions (associated with an investment portfolio) In this indicator, 'publicly disclose[d] [...] information' refers to information readily available to the general public, either directly accessible from a website or from a portal where anyone can register to obtain access. Links should be provided to publicly available information. If the information is stored in a portal, the link to the relevant registration page should also be provided. If the general public can only access certain information by actively requesting access to it via email or similar, it will not be considered to be publicly disclosed for the purpose of this indicator. For guidance on calculating signatories' financed emissions, see the standard developed by the Partnership for Carbon Accounting Financials (PCAF). See the PRI's Climate risk: An investor resource guide, which was designed to help investors navigate the many resources at their disposal and answer common guestions about Other resources climate risk management, including a Q&A on 'Metrics and targets'. For guidance on and examples of climate-related risks and opportunities, see the Recommendations of the Task Force on Climate-related Financial Disclosures and its Annex: Implementing the Recommendations of the TCFD. Logic N/A Dependent on Gateway to N/A Assessment 100 points for this indicator divided between lettered (50 points) and coverage (50 points) answer options. ☐ (B) Scope 2 emissions		[As above]	As above] [As abo		s above]		
☐ (C) Scope 3 emissions (including financed emissions)		[As above]					
O (D) Our organisation did not publicly disclose its Scope 1, Scope 2, or Scope 3 greenhouse gas emissions during the reporting year							
Additional context to your response(s): [Voluntary free text: large]							

Explanatory notes	
Purpose of indicator	Investors are increasingly reporting carbon emissions, a driver of human-caused climate change. Since most emissions disclosure is voluntary, however, many data gaps remain. It is thus considered good practice to disclose investors' Scope 1, Scope 2 and Scope 3 emissions, as well as the methodology used for this calculation. When undisclosed emissions are being estimated, investors should disclose the methodology used to do so. Reporting investors' emissions, and the methodology used, has become an expectation of the leading frameworks for investor action on climate change, including the TCFD, the Glasgow Financial Alliance for Net Zero (GFANZ), and the Investor Climate Action Plans (ICAPs) Expectations Ladder.
Additional reporting guidance	Aligned with TCFD Recommendations: Metric and targets b) There are three categories of carbon emissions: Scope 1 refers to emissions arising from company operations. Scope 2 refers to emissions tied to energy purchases. Scope 3 captures both upstream and downstream emissions not covered in Scope 2, e.g. from the company's supply chain and customers' use of its products or services. It includes financed emissions, such as those associated with an investment portfolio. Signatories should disclose greenhouse gas emissions for their assets under management and the weighted average carbon intensity (WACI) for each product or investment strategy, where data and methodologies allow. These emissions should be calculated in line with the Global GHG Accounting and Reporting Standard for the Financial Industry developed by the Partnership for Carbon Accounting Financials (PCAF Standard) or a comparable methodology. In addition to WACI, signatories should consider providing other carbon footprinting metrics they believe are useful for decision-making. For more guidance, see Implementing the Recommendations of the TCFD. In this indicator, 'publicly disclose[d] [] information' refers to information readily available to the general public, either directly accessible from a website or from a portal where anyone can register to obtain access. Links should be provided to publicly available information. If the information is stored in a portal, the link to the relevant registration page should also be provided. If the general public can only access certain information by actively requesting access to it via email or similar, it will not be considered to be publicly disclosed for the purpose of this indicator.
Other resources	For more comparable methodology and additional guidance, see Carbon Footprinting and Exposure Metrics. For guidance on calculating signatories' financed emissions, see the standard developed by the Partnership for Carbon Accounting Financials (PCAF). For additional guidance on greenhouse gas emissions metrics, see An introduction to responsible investment: climate metrics. See also the PRI's Climate risk: An investor resource guide, which was designed to help investors navigate the many resources at their disposal and answer common questions about climate risk management.

Explanatory notes					
Purpose of indicator	This indicator provides signatories with the opportunity to report on NZAOA's Financing Solutions table.				
	For some signatories, the asset breakdown reported in the Organisational Overview module may partly capture information requested in this indicator. When completing this indicator, such signatories may draw on their responses to [OO 5.3 INF] and [OO 18.2].				
Additional reporting guidance	In this indicator, 'climate solution investments' refers to investments in economic activities considered to contribute substantially to climate change mitigation (solutions substantially reducing greenhouse gases by avoiding emissions and/or by sequestering carbon dioxide already in the atmosphere) or climate change adaptation (where that activity substantially contributes to enhancing adaptive capacity, strengthening resilience and reducing vulnerability to climate change). Economic activities contributing substantially to the first two objectives (climate change mitigation or adaptation) must be assessed to ensure they do not cause significant harm to all remaining environmental or social objectives.				
	'Transition enabling investments' refers to high impact investments which substantially contribute to the net zero transition, e.g. hydrogen pipelines, high voltage direct current transmission lines, smart grids, electric battery plants.				
	For guidance on what is included within the asset classes listed in rows (A–N), please check guidance in the 'Alliance Climate Solution Investment Principles Booklet' and other relevant materials available in the NZAOA extranet.				

Other resources	For guidance on how to report your climate solution investment targets, see the Net Zero Asset Owners' Alliance's (NZAOA) Target Setting Protocol, Third Edition.		
	See also the guidance document to assist signatories of the UN-convened Net Zero Asset Owner Alliance (NZAOA) available on the PRI website.

SUSTAINABILITY OUTCOMES [PGS 47, PGS 47.1, PGS 47.2, PGS 48, PGS 48.1]

Indicator ID	Dependent on:	N/A	Sub-section	PRI Principle	Type of indicator
PGS 47	Gateway to:	Multiple indicators	Sustainability outcomes	1, 2	CORE
Has your organisation identified the intended and unintended sustainability outcomes connected to its investment activities?					
	All investment activities can be connected to positive and negative outcomes. An organisation's intended and unintended sustainability outcomes may include, for example, greenhouse gas emissions or actual and potential negative human rights outcomes for people.				
O (A) Yes, we have	ve identified one o	r more specific sustainability out	tcomes connected to our investment activities		
O (B) No, we have not yet identified the sustainability outcomes connected to any of our investment activities Explain why: [Mandatory free text: large]					
Additional context to your response(s): [Voluntary free text: large]					

Explanatory notes	
Purpose of indicator	This indicator aims to understand whether signatories have identified the positive and negative sustainability outcomes connected to their investment activities, be they intended or unintended.
	Identifying the sustainability outcomes connected to their investment activities is a useful starting point for signatories seeking to develop a proactive approach to taking action on them. It could involve, for example, identifying the human rights outcomes of a portfolio.
	In this indicator, sustainability outcomes 'connected to' signatories' investment activities refers to sustainability outcomes directly or indirectly linked to such activities.
Additional reporting	In this indicator, the term 'investment activities' refers to investment decision-making and stewardship activities.
guidance	Responses should indicate whether signatories have identified the sustainability outcomes connected to their activities. This identification may build on activities such as mapping existing investments to the SDGs or determining the scale of investments in explicitly SDG-aligned activities while looking in more detail at the level of specific positive and negative outcomes.

Other resources	For further guidance, see 'Part 1: Identify Sustainability Outcomes' of the five-part SDG framework presented in the PRI report Investing with SDG Outcomes.				
Guier resources	For specific examples of outcomes assessment among PRI signatories, see the PRI's SDG Outcomes Case Studies.

Additional context t	Additional context to your response(s): [Voluntary free text: large]						

Explanatory notes	
Purpose of indicator	This indicator aims to understand whether signatories' identification of the outcomes connected to their investment activities is based on sustainability frameworks widely recognised at the international, regional or sector/issue level. It will also help PRI gain insight into which outcomes assessment frameworks are most widely used among signatories.
	It is considered good practice to use widely recognised frameworks to measure sustainability outcomes, increasing consistency and data comparability.
	In this indicator, sustainability outcomes 'connected to' signatories' investment activities refers to sustainability outcomes directly or indirectly linked to such activities.
	In this indicator, the term 'investment activities' refers to investment decision-making and stewardship activities.
	In answer option (G), the 'International Bill of Human Rights' includes the Universal Declaration of Human Rights, the International Covenant on Civil and Political Rights and the International Covenant on Economic, Social and Cultural Rights.
	In answer options (J), (K) and (L), responses should provide examples of widely recognised frameworks used besides those listed in the previous answer options. Other frameworks may include:
Additional reporting	Convention on Elimination of All Forms of Racial Discrimination
guidance	Convention on the Elimination of All Forms of Discrimination against Women
	The Convention against Torture and Other Cruel, Inhuman or Degrading Treatment or Punishment
	Convention on Rights of the Child
	International Convention on the Protection of the Rights of All Migrant Workers and Their Families
	The International Convention for the Protection of All Persons from Enforced Disappearance
	Convention on Rights of Persons with Disabilities
	Declaration on the Rights of Indigenous Peoples
	For a list of additional frameworks for identifying sustainability outcomes, refer to Appendix 1 of the PRI report Investing with SDG Outcomes.
	For further reference, see 'Part 1: Identify Sustainability Outcomes' of the 5-part SDG framework presented in the PRI report Investing with SDG Outcomes.
	Signatories may use any of the following frameworks as a reference:
	UN Sustainable Development Goals (SDGs) and targets

O (H) We have not yet determined the most important sustainability outcomes connected to our investment activities						
Additional context to	Additional context to your response(s): [Voluntary free text: large]					

Explanatory notes	
	The purpose of this indicator is to understand the criteria signatories use to determine which are the most important sustainability outcomes connected to their investment activities.
Purpose of indicator	When seeking to take action on the sustainability outcomes connected to their investment activities, signatories must identify which ones are most important. This prioritisation should be based on a thorough analysis that should consider some or all of the criteria listed in the answer options.
	In this indicator, sustainability outcomes 'connected to' signatories' investment activities refers to sustainability outcomes directly or indirectly linked to such activities.
Additional reporting guidance	In this indicator, the term 'investment activities' refers to investment decision-making and stewardship activities.

	The 'most important' sustainability outcomes are those with the highest potential impact (positive or negative) on people or the environment, not on the signatory organisation. For example, concerning human rights issues, the most important outcomes are the human rights at risk of the most severe impacts from the company's activities or business relationships.			
	Although for some signatories a combination of answer options may be applicable, for this indicator, signatories should select up to four answer options that best reflect their approach to determining the most important sustainability outcomes of their investment activities.			
Other resources	The UN Guiding Principles on Business and Human Rights provide a definition of severity. For further guidance, see 'Part 1: Identify Sustainability Outcomes' of the five-part SDG framework presented in the PRI report Investing with SDG Outcomes.

O (B) No, we have not yet taken action on any specific sustainability outcomes connected to our investment activities Explain why not: [Mandatory free text: medium]						
Additional context to your response(s): [Voluntary free text: large]						

Explanatory notes	
Purpose of indicator	This indicator aims to establish whether signatories have decided to take action on the sustainability outcomes connected to the investment activities that they have identified. All investor actions can be connected to positive and negative sustainability outcomes, whether intended or not. Signatories can deliberately use their actions and influence to increase their positive outcomes and reduce their negative outcomes. Taking action on sustainability outcomes involves broadening the analysis of individual investees' financially material ESG issues also to include a parallel analysis of the most important outcomes to society and the environment, including at a systematic level. This indicator also unlocks the Sustainability Outcomes module, which is entirely Plus and voluntary to report on.
	In this indicator, sustainability outcomes 'connected to' signatories' investment activities refers to sustainability outcomes directly or indirectly linked to such activities.
Additional reporting guidance	In this indicator, the term 'investment activities' refers to investment decision-making and stewardship activities.
	Signatories may take action on sustainability outcomes through their investment activities in line with their internal policies and targets. They can direct their investment decision making and stewardship activities to this end. They can also communicate about these activities through disclosure and reporting.
Other resources	For further guidance, see Investing with SDG outcomes: A five-part framework.

	For an articulation of why signatories should consider the sustainability outcomes of their activities, see The SDG investment case.					
	For case studies contributed by fellow PRI signatories, see SDG outcomes case studies.

Explanatory notes					
Purpose of indicator	This indicator aims to gain insight into the main drivers of signatories' decision to take action on sustainability outcomes connected to their investment activities.				
	In this indicator, sustainability outcomes 'connected to' signatories' investment activities refers to sustainability outcomes directly or indirectly linked to such activities.				
Additional reporting	In this indicator, the term 'investment activities' refers to investment decision-making and stewardship activities.				
guidance	We acknowledge that some of these responses are related and that more than four may be relevant for some signatories. However, in this indicator, signatories should select a maximum of four answer options indicating the most significant reasons for taking action on sustainability outcomes.				

	Answer option G refers to taking action on sustainability outcomes for reasons not directly connected with investors' financial return objectives – i.e. considering improvements in sustainability outcomes as worthwhile ends in themselves to be pursued alongside the investor's financial return goals. To clarify, this does not mean that the improvements in outcomes would necessarily be inconsistent with investors' financial goals, nor that they should take priority.
Other resources	For further reference, see 'Part 2: Set Policies on Sustainability Outcomes' of the five-part SDG framework presented in the PRI report Investing with SDG Outcomes.
Other resources	See A Legal Framework for Impact for further analysis on how investors may take action on sustainability outcomes in parallel to pursuing financial return goals.

During the reporting year, what steps did your organisation take to identify a connected to your investment activities?			nd take action on the actual and pote	ntial negative outco	mes for people	
				Explain how these a	activities were condu	ıcted
☐ (A) We assessed the country level context of our potential and/or existing investments to understand how this could connect our organisation to negative human rights outcomes			[Voluntary free text: large]			
investments to	☐ (B) We assessed the sector context of our potential and/or existing investments to understand how this could connect our organisation to negative human rights outcomes			[As above]		
☐ (C) We assessed the human rights performance of our potential and/or existing investments to understand how this could connect our organisation to negative human rights outcomes			[As above]			
☐ (D) We monitored severe and emerging human rights controversies to understand how this could connect our organisation to negative human rights outcomes			[As above]			
☐ (E) We took other steps to assess and manage the actual and potentially negative outcomes for people connected to our investment activities Specify: [Voluntary free text: medium]			[As above]			

O (E) We did not identify and take action on the actual and potentially negative outcomes for people connected to any of our investment activities during the reporting year

Explanatory notes				
Purpose of indicator	Institutional investors' responsibility to respect human rights is defined in the UN Guiding Principles on Business and Human Rights (UNGPs), the OECD Guidelines for Multinational Enterprises and the OECD report on Responsible Business Conduct for Institutional Investors. Meeting international human rights standards – and preventing and mitigating actual and potentially negative outcomes for people – can also lead to better financial risk management and help align investor activities with the evolving demands of beneficiaries, clients and regulators.			
	To meet their responsibility to respect human rights, signatories or external investment managers acting on their behalf should identify and take action on the actual and potentially negative outcomes for people connected to their investment activities.			
	In this indicator, sustainability outcomes 'connected to' signatories' investment activities refers to sustainability outcomes directly or indirectly linked to such activities.			
Additional reporting	In this indicator, the term 'investment activities' refers to investment decision-making and stewardship activities.			
guidance	In each answer option, signatories can describe whether they took these steps pre- and/or post-investment.			
	Signatories can report on their human rights targets or objectives, and their progress, in the Sustainability Outcomes module.			
Other resources	For detailed guidance, including the PRI's position paper and case studies, see the PRI's dedicated webpage on human rights.

Explanatory notes			
Purpose of indicator	It is considered good practice for signatories' human rights due diligence process to identify, per sector, the stakeholders that are at the highest risk of being negatively affected when identifying and taking action on the actual and potentially negative outcomes for people connected to signatories' investment activities.		
Additional reporting guidance	In this indicator, sustainability outcomes 'connected to' signatories' investment activities refers to sustainability outcomes directly or indirectly linked to such activities. In this indicator, the term 'investment activities' refers to investment decision-making and stewardship activities. In answer option A, the term 'workers' refers to full-time and part-time workers, as well as contractors and value-chain workers. Value-chain workers include the workers involved in the full range of an organisation's upstream and downstream activities, which encompass the full life cycle of a product or service, from its conception to its end use. In answer option B, the term 'communities' refers to affected communities directly or through an organisation's value chain. In answer option C, the term 'customers and end-users' refers to the ultimate end users of a finished product, including persons who use or consume the product for private and professional purposes.

☐ (K) Other Specify: [Voluntary free text: medium]	[As above]

Explanatory notes				
Purpose of indicator	The use of reliable sources of information is a key aspect of the identification of actual and potential negative human rights outcomes connected to investment activities. This indicator aims to understand how signatories use different sources to capture industry practices and identify investors' data needs on human rights.			
	In this indicator, sustainability outcomes 'connected to' signatories' investment activities refers to sustainability outcomes directly or indirectly linked to such activities.			
Additional reporting guidance	In this indicator, the term 'investment activities' refers to investment decision-making and stewardship activities.			
	In column (1), signatories should elaborate on how these information sources are used, including how they inform their decision-making and stewardship activities.			
Other resources	For detailed guidance, including the PRI's position paper and case studies, see the PRI's dedicated webpage on human rights.

During the reporting year, did your organisation, directly or through influence over investees, enable access to remedy for people affected by negative human rights outcomes connected to your investment activities?					
activities			ed by negative human rights outcomes we caused or co	ontributed to through o	ur investment
☐ (B) Yes, we us to through our	[Voluntary free sed our influence t investment activit [Voluntary free	o ensure that our investees provies	rided access to remedies for people affected by negative	ve human rights outcor	mes we were linked
O (C) No, we did	l not enable acces	s to remedy directly, or through ivities during the reporting year	the use of influence over investees, for people affected	l by negative human ri	ghts outcomes

Explanatory notes	
Purpose of indicator	This indicator aims to understand whether signatories provide or enable, as relevant, access to remedy for people affected by negative human rights outcomes connected to their investment activities.
Turpede or maioarer	Signatories and their investees have a responsibility to mitigate or remediate any negative human rights outcomes arising from their activities, in line with international standards such as the UN Guiding Principles on Human Rights.
	In this indicator, the term 'investment activities' refers to investment decision-making and stewardship activities.
Additional reporting guidance	This indicator refers to negative human rights outcomes that an investor: • Has caused – through its business activities (e.g. outcomes on its employees). An investor can 'cause' negative human rights outcomes where its activities remove or reduce someone's ability to enjoy a human right, typically in relation to their operational activities. However, where the investor holds a controlling stake in an investee company (e.g. through the majority ownership model in private equity), it can also occur through their investment activities.

	Remedy allows affected people to seek redress for any harm they have experienced due to business activities. Providing access to a remedy is an expectation of both states – through judicial and non-judicial mechanisms – and businesses – through grievance mechanisms. A remedy is a flexible concept and not limited to compensation. It may include an apology, provisions to ensure the harm cannot recur, restitution or rehabilitation, cessation of a particular activity or relationship or something else agreed upon by the affected stakeholders and the entity that caused the negative impact.		
	Where signatories are linked to the negative human rights outcomes, they can work with their investees who have caused or contributed to the outcome to ensure access to effective remedies for victims. Signatories may use leverage to influence investees, or other stakeholders involved, to provide access to effective remedies.		
	In instances where signatories can be said to have caused or contributed to a negative human rights outcome through high or controlling ownership, they have a responsibility to ensure, either alone or more logically in collaboration with the investee involved, that victims have access to effective remedies.		
	 Has contributed to – a) through its business activities where it is one of several contributors or b) through a business relationship or investment activity that induces or facilitates an outcome from an investee company or project. It could occur through investments when the investor holds high ownership stakes and could or should have known about harm, but preventive actions were insufficient. Is directly linked to – through the activities, products or services of an investee company or project.
