Investor Statement

The need for urgent action

Biodiversity, and the ecosystem services it supports (e.g., pollination, food production, infectious disease control, carbon sequestration, coastal protection) underpin our financial and economic systems. The investment value chain, and our ability to optimize overall returns to end clients and beneficiaries, depends on and impacts biodiversity and ecosystem services. The planetary crisis — encompassing climate change, biodiversity loss, and pollution — therefore presents a systemic risk with material impacts for institutional investors.

With an unprecedented loss of biodiversity occurring globally, and over one million species threatened with extinction, urgent action is needed. The Paris Agreement (2015, adopted by 196 countries) and the Kunming-Montreal Global Biodiversity Framework (2022, adopted by 188 countries) have provided governments and non-state actors with frameworks for action that include overarching goals and targets. Full implementation of these landmark agreements is essential to global economic and social prosperity. Given its importance for long-term financial performance, our core duty as investors includes addressing the systemic, physical and transition risks stemming from biodiversity loss in line with internationally agreed frameworks.

Forest loss and land degradation has been identified as an important driver of biodiversity loss and is responsible for a significant share of global CO2 emissions. The Glasgow Leaders’ Declaration on Forests and Land Use (2021, adopted by 145 countries) highlighted the need to halt and reverse forest loss and land degradation by 2030 to meet global climate, biodiversity and sustainable development goals. Forest loss and land degradation also presents reputational, legal, market and systemic risks for investors.

We recognise the role that we as investors can play to halt and reverse forest loss and land degradation as a key driver of biodiversity loss, including through investor stewardship.

We acknowledge the potential of collaborative engagement initiatives to enhance corporate practices regarding nature and reduce risks to our investments. We support collaborative investor action to clarify expectations of companies and other stakeholders and will look for opportunities to work with companies and other stakeholders to meet those expectations. Each endorsing investor shall make individual decisions around (proxy) voting, escalation and any use of investment powers, but we nonetheless support ambitious collaborative stewardship activities that target positive change.

1 https://www.ipbes.net/global-assessment
2 In particular Article 2.1c of the Paris Agreement and Target 14 of the Global Biodiversity Framework that mandate alignment of all financial flows with the missions of the two frameworks.
3 Forest loss and land degradation is understood here as the conversion of natural lands, where conversion is defined as the “change of a natural ecosystem to another land use or profound change in the natural ecosystem’s species composition, structure, or function” (https://accountability-framework.org/use-the-accountability-framework/definitions/). The AFOLU sectors are responsible for 13% of global CO2 emissions. https://www.ipcc.ch/report/ar6/wg3/downloads/report/IPCC_AR6_WGIII_Chapter_07.pdf
4 Each endorsing investor shall abide by applicable PRI terms of reference, policies and guidelines, their own antitrust/competition compliance policies, and all applicable laws in their jurisdiction(s) potentially applicable to joint action.
Expectations of companies

Business operations, strategy and risk management

- Publicly commit to take action to halt and reverse biodiversity loss by 2030, in line with the Global Biodiversity Framework.
- Establish Board oversight of assessing and managing nature-related dependencies, impacts, risks and opportunities.
- Regularly monitor, assess, disclose and mitigate\(^5\) nature-related dependencies, impacts, risks and opportunities along operations and value chain. Seek alignment with internationally agreed disclosure frameworks such as the Taskforce on Nature-related Financial Disclosure (TNFD).
- Set ambitious time-bound and science-based targets, with interim milestones, towards eliminating deforestation and biodiversity loss across operations and value chain.\(^6\)
- Adopt sustainable practices for land-based operations to reduce land degradation while increasing biodiversity and soil health, in line with the UN’s Land Degradation Neutrality Principles.

Supply chain management

- Set goals towards no-deforestation, no-conversion of natural ecosystems and respect for human rights as part of responsible sourcing policies, across geographies and direct and indirect suppliers. Apply internationally agreed definitions and cut-off dates for such goals.\(^7\)
- Establish due diligence company systems to implement these goals.
- Map, assess and monitor risks throughout the full supply chain of forest-risk commodities, ensuring an appropriate scope of responsible sourcing policies and managing for compliance.
- Consider suitable escalation strategies in case of non-compliance.
- Publicly report progress towards company goals, disclose (non-)compliance of supply chain partners with responsible sourcing policies, and ensure accuracy in claims about company performance.

Political engagement

- Publicly commit to align direct and indirect political engagement activities with the missions of the Global Biodiversity Framework and Paris Agreement.\(^8\)
- Establish and disclose robust governance processes and board oversight to ensure alignment of all direct and indirect political engagement, in all geographic regions, with those missions.
- Disclose affiliations to trade associations, think tanks and similar bodies across geographies.
- Identify, assess, and monitor the policy positions and activities of such bodies. Where there is misalignment with the aforementioned missions, consider corrective action, with suitable escalation strategies.

---

\(^5\) Mitigation should take place according to the mitigation hierarchy principles, with prioritisation of avoidance, minimisation, restoration, and only as a last resort compensation and offsetting. [http://www.csbi.org.uk/our-work/mitigation-hierarchy-guide/](http://www.csbi.org.uk/our-work/mitigation-hierarchy-guide/)

\(^6\) 2025 is the Accountability Framework’s recommended target date for eliminating deforestation and ecosystem conversion, with the Glasgow Leaders Declaration on Forests and Land Use committing to working to halt forest loss and land degradation by 2030. Implementation towards these goals should be underway or commence immediately.

\(^7\) See definitions from the Accountability Framework: [https://accountability-framework.org/use-the-accountability-framework/definitions/](https://accountability-framework.org/use-the-accountability-framework/definitions/)

\(^8\) For further information on alignment with the Paris Agreement, see the Global Standard on Responsible Corporate Climate Lobbying [https://climate-lobbying.com/](https://climate-lobbying.com/). Its principles are also applicable to alignment with the Global Biodiversity Framework.
